Rare HTML

Elements Nobody Uses

<meter>

<meter>: represents either a scalar value within a known range or a fractional value.

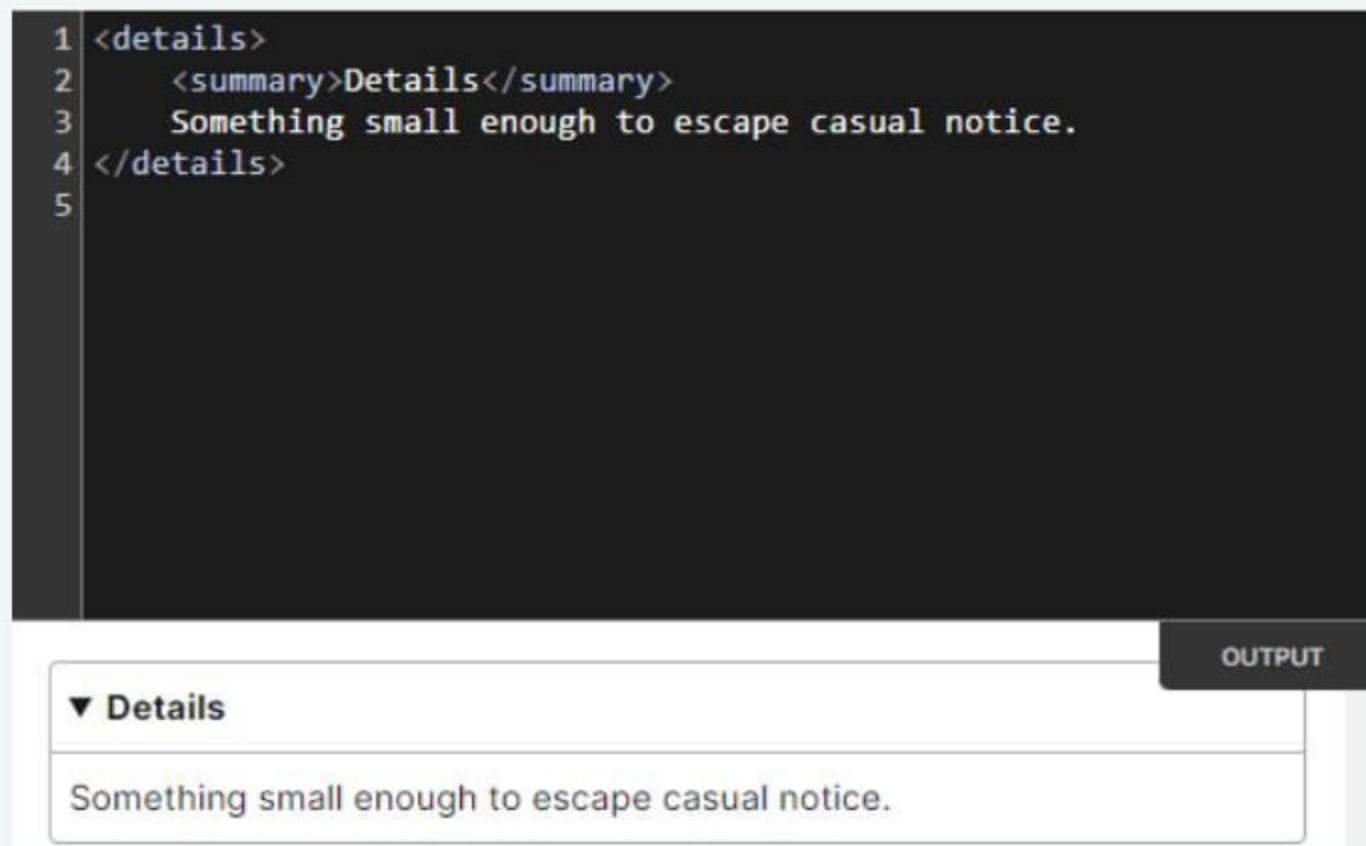

```
<div class="skills">  
  <label for="html">HTML</label>  
  <meter id="html" value="8" min="0" max="10">2 out of 10</meter><br>  
</div>
```

◁details> & ◁summary>

details and summary are used to create collapsible content without using any JavaScript. It's the semantic method of creating dropdowns.

```
1 <details>
2   <summary>Details</summary>
3   Something small enough to escape casual notice.
4 </details>
5
```

 and <ins>

The tag represents a deleted piece of text. The <ins> tag represents a piece of included text

```
<p>Pluto<del>is</del> <ins>isn't</ins> a planet.</p>
```

Pluto ~~is~~ isn't a planet.

<abbr>

The abbr element allows you to add abbreviations to your document. When the user hovers over the abbreviation, the full form is displayed.

```
<p><abbr title="HyperText Markup Language">HTML</abbr> is the markup language</p>
```

HTML is the markup language

<progress>

The HTML < progress> tag is used to show how far work has progressed. It makes it simple for web developers to add a progress bar to their website.

```
<progress id="project" max="100" value="70"> 70% </progress>
```

<datalist>

datalist allows you to add an autocomplete suggestions to your input elements.

```
1 <label for="ice-cream-choice">Choose a flavor:</label>
2 <input list="ice-cream-flavors" id="ice-cream-choice"
  name="ice-cream-choice">
3
4 <datalist id="ice-cream-flavors">
5   <option value="Chocolate">
6   <option value="Coconut">
7   <option value="Mint">
8   <option value="Strawberry">
9   <option value="Vanilla">
10 </datalist>
11
```

The screenshot shows a web browser interface. At the top, there is a code editor with 11 lines of HTML code. The code defines a label 'Choose a flavor:', an input field with id 'ice-cream-choice' and list 'ice-cream-flavors', and a datalist with id 'ice-cream-flavors' containing five options: Chocolate, Coconut, Mint, Strawberry, and Vanilla. Below the code editor, the rendered HTML is shown. It features the label 'Choose a flavor:' followed by a dropdown menu. The dropdown menu is open, displaying the five flavor options: Chocolate, Coconut, Mint, Strawberry, and Vanilla. To the right of the dropdown menu, there is a button labeled 'OUTPUT'.

<sup> & <sub>

You can add superscripts (like x^2) with sup and subscripts (like x_0) using sub to your document.

```
1 <p>
2   Almost every developer's favorite molecule is
3   <strong>
4     C<sub>8</sub>
5     H<sub>10</sub>
6     N<sub>4</sub>
7     O<sub>2</sub>
8   </strong>
9   , also known as "caffeine."
10 </p>
11
```

OUTPUT

Almost every developer's favorite molecule is C₈ H₁₀ N₄ O₂ ,
also known as "caffeine."

```
1 <p>
2   The <strong>Pythagorean theorem</strong> is often
3   expressed as the following equation:
4 </p>
5 <p>
6   <var>length<sup>2</sup></var> +
7   <var>width<sup>2</sup></var> =
8   <var>hypotenuse<sup>2</sup></var>
9 </p>
10
```

OUTPUT

The **Pythagorean theorem** is often expressed as the following
equation:

$length^2 + width^2 = hypotenuse^2$
