Collective Character Objects	

For the web developers, it is crucial to be proficient in HTML, and while HTML is not the most difficult to get accustomed to, one can still manage to forget all the nooks and crannies it has to offer. A good solution, therefore, is to always have a cheat sheet at hand, helping you in your most troubling moments.

Document Summary

Let us see how we can break the code up in the different components.

<!DOCTYPE>

Defines the document type.

<html> </html>

This tag specifies that the webpage is written in HTML, it appears at the very first and last line of the webpage. It is mainly used to show that the page uses HTML5 - the latest version of the language. Also known as the root element, this tag can be thought of as a parent tag for every other tag used in the page.

<head> </head>

This is the head tag that contains the metadata of the document.

<title> </title>

As the name suggests, this tag contains the title/name of the webpage. You can see this in your browser's title bar for every web page open in the browser.

<body> </body>

Everything the user can see on a webpage is written inside this tag. It is a container for all the contents of the webpage.

Example

```
<html>
  <head>
    <title>My Website Name</title>
  </head>
  <body>

  </body>
</html>
```

Document Information

<base/>

Used to specify the base URL of your site, this tag makes linking to internal links on your site cleaner.

<meta/>

This is the metadata tag for the webpage. Can be useful for mentoring the page's author, keywords, original published date etc.

<link/>

This is used to link to scripts external to the webpage. Typically utilized for including stylesheet.

<style> </style>

The style tag can be used as an alternative to an external stylesheet, or complement it. Includes the webpage's appearance information.

<script> </script>

Used to add code snippets, typically in JavaScript, to make webpage dynamic. It can also be used to just link to an external script.

Example

```
<html>
  <head>
    <meta charset="utf-8">
    <base
      href="http://mywebsitename.com
      target="_blank" />
    <title>My Website Name</title>
    <link rel="stylesheet"
      href="/css/style.css">
    <script type="text/javascript">
      var dummy=0;
    </script>
  </head>
  <body>

  </body>
</html>
```

Document Structure

<h1> </h1> to <h6> </h6>

Represents six levels of section headings, <h1> is the max level and <h6> is the lowest level.

<p> </p>

Usually represented paragraph of the webpage.

Insert a single line break.

<div> ... </div>

A webpage's content is usually divided into blocks, specified by the div tag.

 ...

The HTML element is a generic inline container for phrasing content, which does not inherently represent anything. It can be used to group elements for styling purposes.

<hr/>

Defines thematic break in the webpage.

<!--! -->

Used to add the comment in the document for the developers.

Example

```
<div>
  <!--! This is comment in HTML sheet -->
  <h1>This is max title in HTML5</h1>
  <p>This is <span>Highlighted</span>
    paragraph.</p>
  <hr/>
  <h6>This is min tile in HTML5</h6>
</div>
```

Text Formatting

...

indicates that its contents have strong importance, seriousness, or urgency. Browsers typically render the contents in bold type.

...

Alternative to above tag, also creates text bold.

...

Another emphasize tag, it creates text in italic.

<i> </i>

Also used to display text in italic, but does not emphasize it like above tag.

<cite> </cite>

used to mark up the title of a cited creative work. The reference may be in an abbreviated form according to context-appropriate conventions related to citation metadata.

represents a range of text that has been deleted from a document. This can be used when rendering "track changes"

<ins> </ins>

Denotes Text that has been inserted into the webpage.

<blockquote> </blockquote>

indicates that the enclosed text is an extended quotation.

<q> </q>

indicates that the enclosed text is a short inline quotation. Most modern browsers implement this by surrounding the text in quotation marks. This element is intended for short quotations that don't require paragraph breaks

<abbr> </abbr>

Denotes abbreviations, along with the full forms.

<address> </address>

Tag for specifying author's contact/address details.

<dfn> </dfn>

Tag dedicated to the definitions.

<code> </code>

This is used to display a code snippets within the paragraph.

_{....}

Used to writing a subscript (small font just below the midpoint of normal font.)

^{....}

Same as above, but this tag is for superscripting.

<small> </small>

Reduced the text size in HTML5, it often refers to redundants or invalid information.

Example

`<p>Bold text Regular Text & some words in italic regular text again.</p>`

`<blockquote>Anyone who has never made a mistake has never tried something new. <cite>- Albert Einstein</cite></blockquote>`

`<p>A code snippet: <code>write some code in this tag</code></p>`

Links

` ... `

Anchor tag, Primarily used to creates a hyperlink to web pages, files, email addresses, locations in the same page, or anything else a URL can address.

- Sections of a page with document fragments
- Specific text portions with text fragments
- Telephone numbers with tel: URLs
- Email addresses with mailto: URLs
- SMS text messages with sms: URLs

Images

``

A tag to display images in the webpage.

`src="url"`

The url or path where the images is located on your drive or on the web.

```

```
<area shape="rect" coords="0,0,60,100"
href="selectarea1.html" alt="selectarea1">
```

```
<area shape="rect" coords="90,58,3"
href="selectarea2.html" alt="selectarea2">
```

```
<area shape="circle" coords="150,58,8"
href="selectarea3.html" alt="selectarea3">
```

```
</map>
```

Lists

** ... **

Tag for ordered or numbered list of items.

** ... **

Contrary to the above tag, used for unordered list of items.

** ... **

Individual item as part of the list.

<dl> ... </dl>

Represents a description list.

<dt> ... </dt>

Specifies a term in a description or definition list.

<dd> ... </dd>

Provides the description, definition, or value for the preceding term.

Example

```
<ol>
  <li>January</li>
  <li>February</li>
  <li>March</li>
</ol>
```

```
<ul>
  <li>April</li>
  <li>May</li>
  <li>June</li>
</ul>
```

```
<dl>
  <dt>Origin</dt>
  <dd>Japan</dd>
</dl>
```

Forms

<form> ... </form>

The parent tag for an HTML form.

action="url"

The URL listed here is where the form data will be submitted once user fills it.
