

6 Quick & Useful 💡

Killer CSS Shorthands

You should try now! 📖

Hey there! 🐬

Shorthands are usually one of the most searched features our code can have, whether its for readability or shorting that thick, 1000-line program. Today, we're going to see some of the most useful CSS shortcuts you can find out there!

Swipe left! 👉

Background Prop.

4 props transformed into 1!

CSS — Longhand

```
background-color: #000; /* Prop #1 */  
background-image: url('...'); /* Prop #2 */  
background-repeat: no-repeat; /* Prop #3 */  
background-position: top right; /* Prop #4 */
```

CSS — Shorthand

```
background: #000 url('...') no-repeat top right;
```

Font Prop.

One of the hardest... or not?

CSS — Longhand

```
font-style: italic; /* Prop #1 */  
font-weight: bold; /* Prop #2 */  
font-size: 0.8em; /* Prop #3 */  
line-height: 1.2; /* Prop #4 */  
font-family: Arial, sans-serif; /* Prop #5 */
```

CSS — Shorthand

```
font: italic bold 0.8em/1.2 Arial, sans-serif;
```

Border Prop.

Probably the one you learnt first ;)

CSS — Longhand

```
border-width: 1px; /* Prop #1 */  
border-style: solid; /* Prop #2 */  
border-color: #000; /* Prop #3 */
```

CSS — Shorthand

```
border: 1px solid #000;
```

Margin/Padding Prop.

They both work the same way!

CSS — Longhand

```
margin-top: 10px; /* Prop #1 */ •  
margin-right: 10px; /* Prop #2 */ •  
margin-bottom: 10px; /* Prop #3 */ •  
margin-left: 10px; /* Prop #4 */ •
```

CSS — Shorthand #1

```
margin: 10px 10px 10px 10px; /* Option 1 */
```

CSS — Shorthand #2

```
margin: 10px 10px; /* Option 2 */
```

CSS — Shorthand #3

```
margin: 10px; /* Option 3 */
```

Border Radius Prop.

Not that similar to Border...

CSS — Longhand

```
border-top-left-radius: 13px; /* #1 */ •  
border-top-right-radius: 13px; /* #2 */ •  
border-bottom-right-radius: 4px; /* #3 */ •  
border-bottom-left-radius: 4px; /* #4 */ •
```

CSS — Shorthand #1

```
border-radius: 13px 13px 4px 4px; /* Option 1 */
```

CSS — Shorthand #2

```
border-radius: 13px 4px; /* Option 2 */
```

Resetting

Literally the easiest

CSS — Longhand

```
background: none; /* Prop #1 */
border: none; /* Prop #2 */
color: none; /* Prop #3 */
font: none; /* Prop #4 */
outline: none; /* Prop #5 */
margin: none; /* Prop #6 */
```

CSS — Shorthand

```
all: unset;
```
