# Steal these Cool APIs

@manavcodes  
**Manav Shah**

# What is an API?

API stands for ***application programming interface*** and is a way for two or more pieces of ***software to communicate.***

Here are some cool APIs you would like to use in your next project. 

@manavcodes  
**Manav Shah**

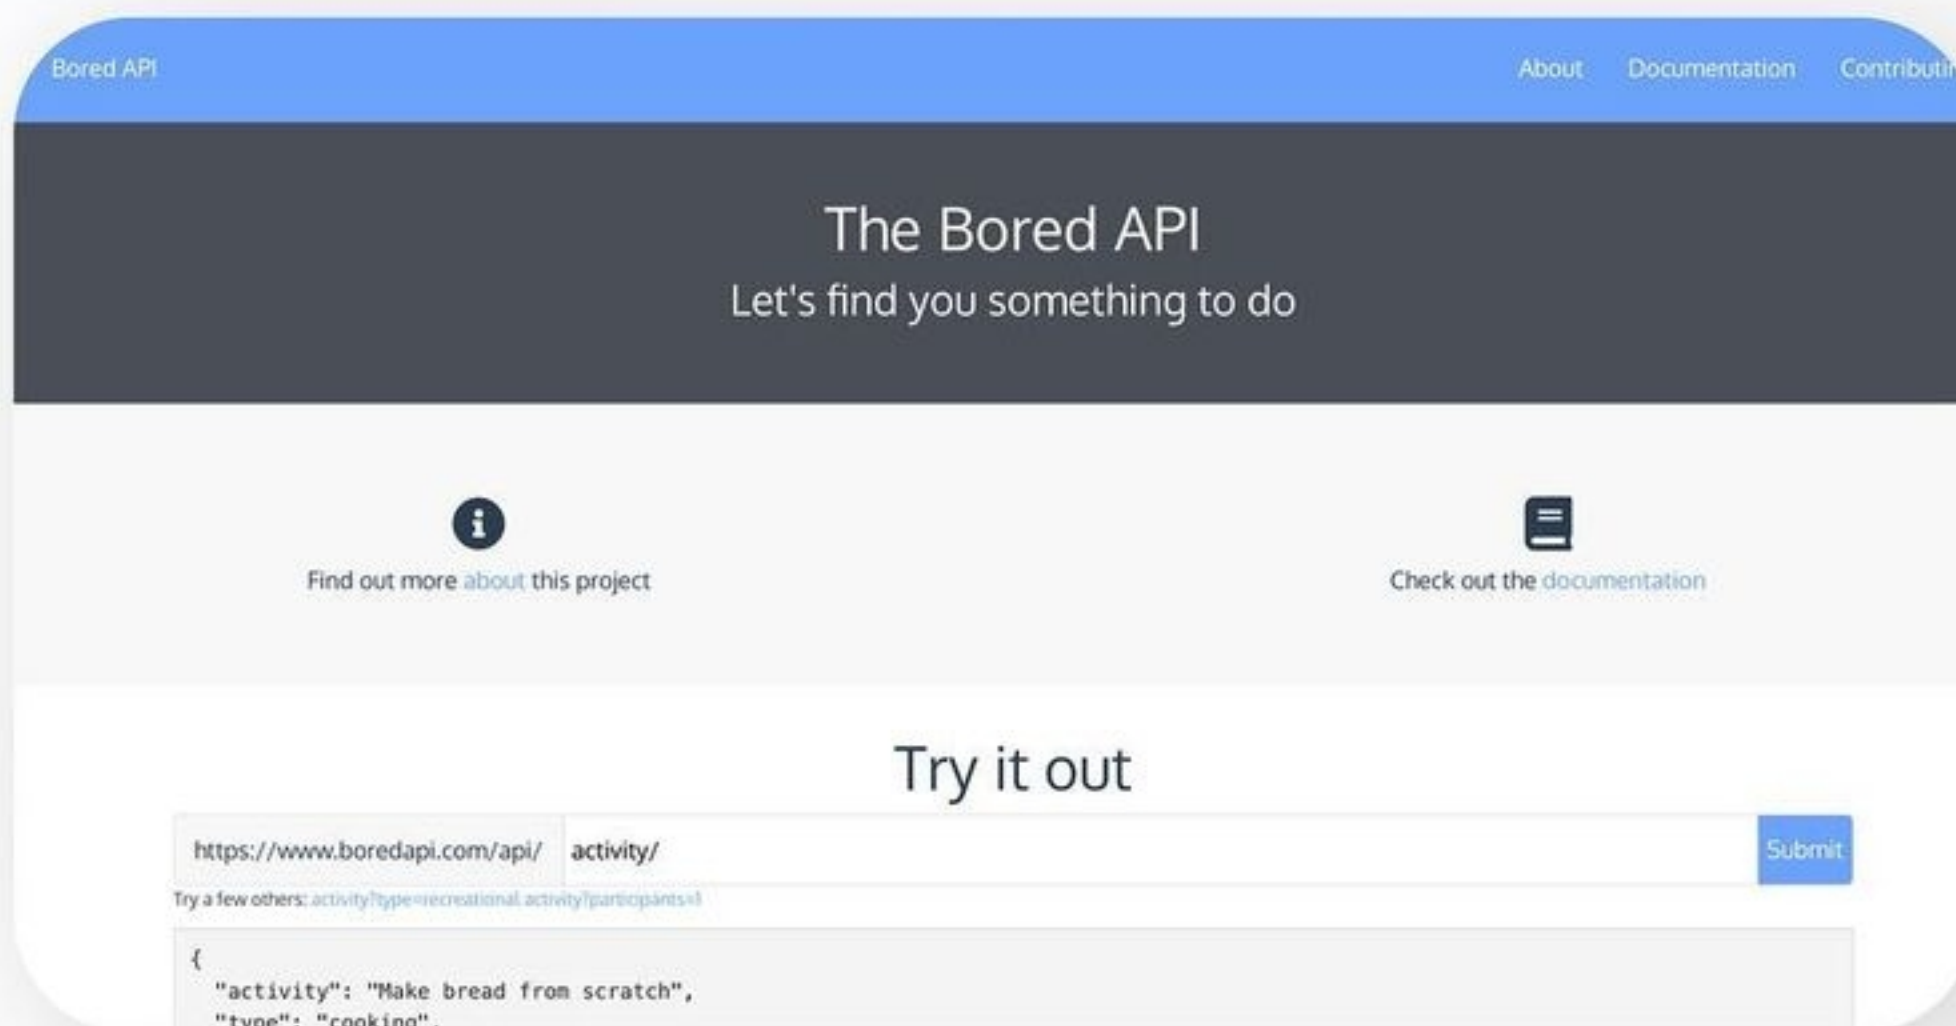

# The Bored API

With the Bored API, you will never be bored again! When you send the Bored API a request, it returns a fun activity for you to do.

# F\*\*k off as a service API

This api provides scalable solution to the common problem of telling people to f\*\*k off.

 **foaas.com**

## FOAAS

**F\*\*k Off As A Service**

v2.3.1

### Introduction

FOAAS (F\*\*k Off As A Service) provides a modern, RESTful, scalable solution to the common problem of telling people to f\*\*k off.

### API

#### Content Negotiation

FOAAS will respond to the following 'Accept:' values with appropriate content

- text/plain - Content will be returned as a plain string.
- application/json - Content will be returned as a JSON object `{ message: 'message', subtitle: 'subtitle' }`
  - Supports jsonp by including `?callback=?`
- text/html - Content will be returned as an HTML page with a twitter bootstrap hero unit, containing the message and the subtitle.
- application/xml - Content will be returned as a XML document.

# Balldontlie API

The Balldontlie API allows you to access NBA-related data.

 [\*balldontlie.io\*](https://balldontlie.io)

Q Search

Introduction

Getting Started

Players

Teams

Games

Stats

Season Averages

### Introduction

Welcome to the balldontlie API!

You can use our free API to access NBA related data. No email required. No API key required.

This is an [open source project](#). Feel free to open issues and pull requests.

Here's an example of something you can build with this API: [example](#)

Email us at [hello@balldontlie.io](mailto:hello@balldontlie.io) with any comments or questions. We hope to build on top of this first iteration with community input. Please reach out if you want to help.

Also, please feel free to [donate](#) to help keep the lights on.

# Food API

Above 5k+ and 90k+ products, you can use to build a great food app.

[🔗 spoonacular.com/food-api](https://spoonacular.com/food-api)

The screenshot shows the Spoonacular API website. At the top, there's a navigation bar with links: OVERVIEW, DOCS, PRICING, TERMS, APPLICATIONS, and a green button labeled START NOW. The main heading is "The only food API you'll ever need." Below this, there's a paragraph: "Our knowledge engineers spent years crafting our **complex food ontology**, which allows us to understand the relationships between ingredients, recipes, nutrition, allergens, and more." Another paragraph follows: "We understand 'nut free' muffins can't contain pecans (even if the recipe doesn't mention 'nuts' anywhere!) and we automatically determine that a recipe with Worcestershire sauce isn't vegetarian (we're looking at you, anchovies.)" At the bottom left, there's a PDF icon and a link "Download API slides". On the right side, there's a diagram showing a network of food-related concepts: "menu items" (blue circle with a burger icon), "products" (red circle with a shopping basket icon), and a green circle with a pot icon. These are connected to various smaller icons representing ingredients like tomatoes, carrots, and peppers, as well as a dollar sign icon.
