# Interaction in JavaScript

alert

confirm

prompt

## Interaction in JavaScript

Javascript allows us the privilege to which we can interact with the user and respond accordingly.

let's see a couple of functions to interact with the user

`alert()`

`prompt()`

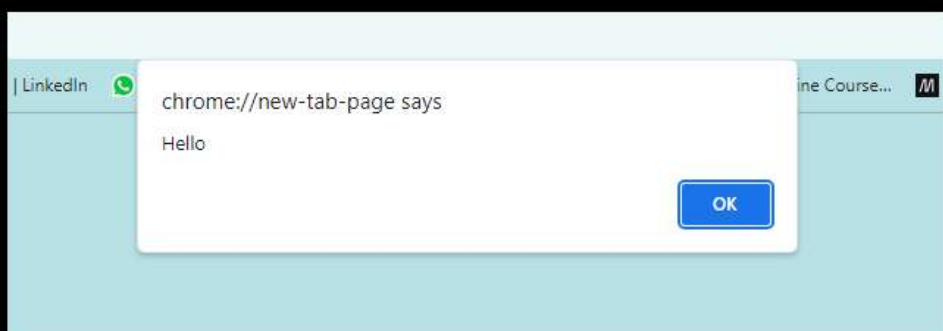

`confirm()`

## alert()

This one we've seen already. It shows a message and waits for the user to press "OK".

## Example

```
alert("Hello");
```

## prompt()

The function prompt accepts two arguments:

```
result = prompt(title, [default]);
```

It shows a modal window with a text message, an input field for the visitor, and the buttons OK/Cancel.

### title

The text to show the visitor.

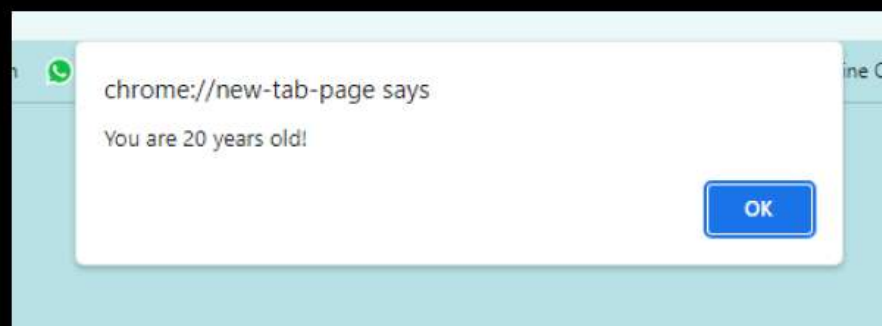

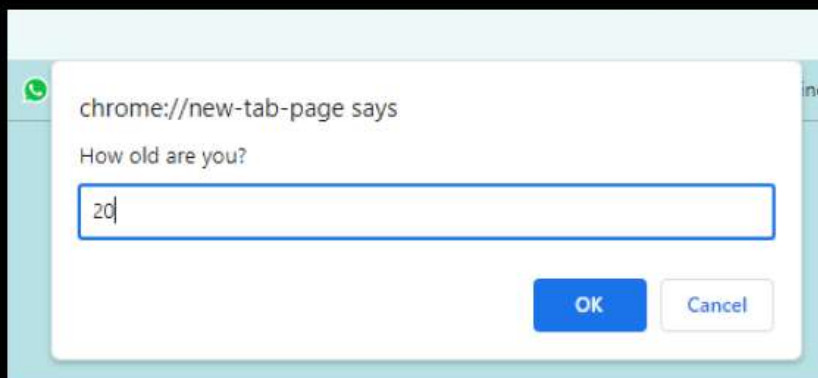

### default

An optional second parameter, the initial value for the input field.

## Example

```
let age = prompt('How old are you?', 100);
```

```
alert(`You are ${age} years old!`);
```

## confirm()

The function confirm shows a modal window with a question and two buttons: OK and Cancel.

```
result = confirm(question);
```

The result is true if OK is pressed and false otherwise.

```
let isBoss = confirm("Are you the boss?");
```

```
alert( isBoss );
```

# Output
