

Write CSS Like A Pro

Always Prefer Using CSS Variables For Big Apps

```
body {  
  background-color: #000;  
}  
  
h2 {  
  border: 2px solid #fff;  
}  
  
.box {  
  background-color: #fff; color: #000;  
}
```

```
:root {  
  --black: #439604;  
  --white: #439604;  
}  
body {  
  background-color: var(--black);  
}  
h2 {  
  border: 2px solid var(--white);  
}  
.box {  
  background-color: var(--white); color: var(--black);  
}
```

Using Short Hands Could Be Good Sometimes

```
.box{  
  padding-top: 10px;  
  padding-bottom: 20px;  
  padding-left: 15px;  
  padding-right: 15px;  
  margin-top: 10px;  
  margin-bottom: 10px;  
  margin-left: 20px;  
  margin-right: 20px;  
  border-width: 2px;  
  border-style: solid;  
  border-color: #fff;  
}
```

```
.box{  
  padding: 10px 15px 20px 15px;  
  margin: 10px 20px;  
  border: 2px solid #fff;  
}
```

Try Giving Proper And Relatable Named To Classes & Id's

```
.p {  
  color: #000;  
}  
.myform {  
  background-color: #eee;  
}
```

```
.article-paragraph{  
  color: #000;  
}  
.contact-form{  
  background-color: #eee;  
}
```

Always Reset Default Values , At The Start

```
h1 {  
  margin: 0;  
  padding: 0;  
}  
.box {  
  margin: 0;  
}
```

```
* {  
  box-sizing: border-box;  
  margin: 0;  
  padding: 0;  
}
```

Use Dry* Code

```
h1{  
  color: #eee;  
}  
h2{  
  color: #eee;  
}  
h3{  
  color: #eee;  
}
```

```
h1,h2,h3{  
  color: #eee;  
}
```
