

5 Practical CSS Tricks For Developers

Swipe  to check them out

1

Handle text overflow

```
.text {  
  overflow: hidden;  
  white-space: nowrap;  
  text-overflow: ellipsis;  
}
```

2

Applying shadows

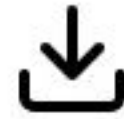

```
.container {  
  /* box-shadow: offsets blur color; */  
  box-shadow: 0 0 5px rgba(0, 0, 0, 0.2);  
  /* offsets = horizontal, vertical */  
}
```

3

Using SVG inside `<i>` tag

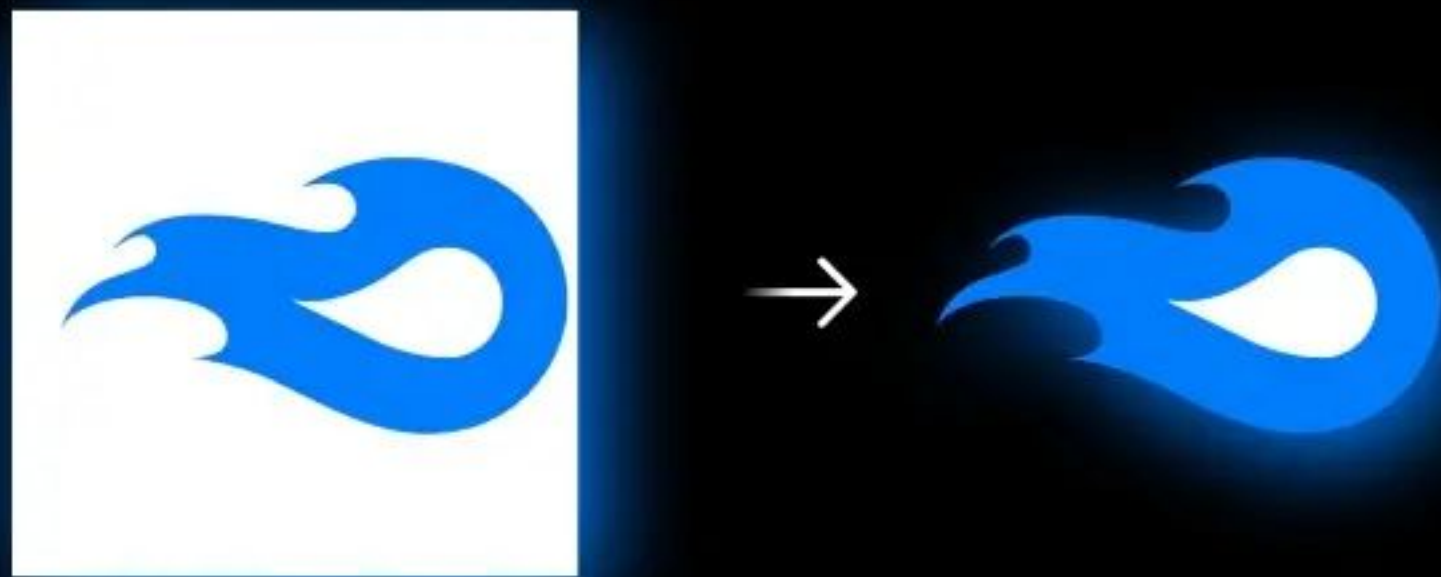

```
←!— Don't use SVGs in <img> tag instead use in <i> →  
<i>  
  <svg viewBox="0 0 24 24">  
    <circle cx="11" cy="11" r="8"></circle>  
    <line x1="21" y1="21" x2="16.65" y2="16.65"></line>  
  </svg>  
</i>  
←!— It helps to easily give styles to SVGs →
```

4

Transparent image shadows

```
.shadow {  
  filter: drop-shadow(10px 10px 50px #007BFA);  
}
```

5

Simple perfect *<button>*

Simple

```
button {  
  background: linear-gradient(to right, #2e95ff, #0061c6);  
  color: white;  
  border: none;  
  font: 400 2rem system-ui;  
  padding: 15px 30px;  
  border-radius: 10px;  
  cursor: pointer;  
}  
button:hover {  
  background: #0053A8;  
}
```
