# findLast

**findLast()** method looks at an array from the end and give you the value of the first element that meets a certain condition

```
const numbers = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10];  
const lastNumber = numbers.findLast(elem => elem < 6);  
  
console.log(lastNumber); // Output: 5
```

# findLastIndex

**findLastIndex()** method finds the position in the array of the last element that meets a certain condition

```
const numbers = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10];  
const lastIndex = numbers.findLastIndex(elem => elem > 5);  
  
console.log(lastIndex); // Output: 9
```

# toReversed

**toReversed()** method is used to reverse the array without changing the original one.

```
const numbers = [1, 2, 3, 4, 5];  
const reversed = numbers.toReversed();  
  
console.log(reversed); // Output: 5, 4, 3, 2 ,1
```

# toSorted

**toSort()** method is used for sorting an array without modifying the original array.

```
const numbers = [5, 2, 1, 4, 3];  
const sorted = numbers.toSorted();  
  
console.log(sorted); // Output: 1, 2, 3, 4 ,5
```

# with

**with()** method is used for updating element in an array without modifying the original array.

```
const numbers = [1, 2, 3, 4, 5];  
const with = numbers.with(2, 6);  
  
console.log(with); // Output: 1, 2, 6, 4 ,5
```
