

6 Amazing JavaScript Tricks You Didn't Know

Halim Shams

Operating System Details

This snippet will **reveal the OS** running on the user's device.

```
console.log(navigator.platform);
```

Halim Shams

Stop The Refresh

This will prevent the page from refreshing.

```
<a href="JavaScript:void(0);" onclick="alert('Well done!')">  
  Click Me!  
</a>
```

Halim Shams

Redirect New Page

This will **redirect user** to a new page.

```
function redirect() {  
  window.location.href = "newPage.html";  
}
```

Email Validation

This snippet will **validate any email** with complete logic.

```
function validateEmailUnicode(email) {  
    var re =  
        /^[^\s@]+@[^\s@]+\.[^\s@]+$/;  
    return re.test(String(email).toLowerCase());  
}
```

Detect Mobile

This will let you **detect mobile** browser.

```
function detectmob() {  
  if (  
    navigator.userAgent.match(/Android/i) ||  
    navigator.userAgent.match(/iPhone/i) ||  
    navigator.userAgent.match(/iPod/i) ||  
    navigator.userAgent.match(/Windows Phone/i)  
  ) {  
    return true;  
  } else {  
    return false;  
  }  
}
```
