\<p\> Hey! 🌎 \</p\>

As web developers, HTML is one of the most useful tools we can find. That's why today I brought you a compilation of 5 of the **most exclusive, useful and unknown HTML tricks** for you to use in your coding journey! Enjoy :)
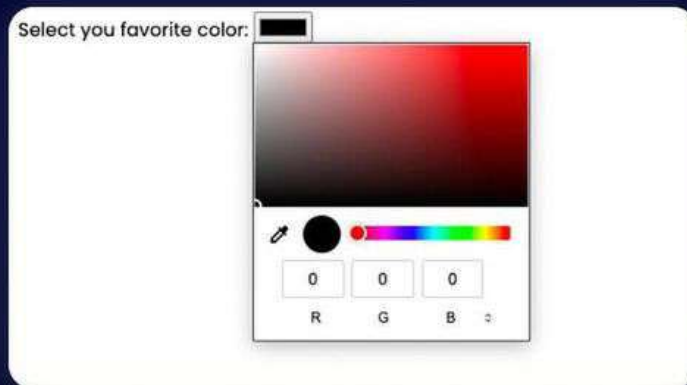

Codes in CodePen

01

Color Picker

✌️ You can create a color picker using this simple *one-liner!*

Result

```
                                          HTML — Color Picker

<label for="favcolor">
    Select you favorite color:
</label>

<input type="color" name="favcolor">
```

02

Data List

Especially useful when we've got *many options* to choose from.

"cat"

"dog"

"pig"

"cow"

Result

```
HTML — Data List

<input list = "animals" name = "animal">
<datalist id = "animals">
    <option value = "cat">
    <option value = "dog">
    <option value = "pig">
    <option value = "cow">
</datalist>
```

03

Small Text

🥑 If you have a website for your business, it can always be useful to know *about this trick*.

50% off the new iPhone 14 !*
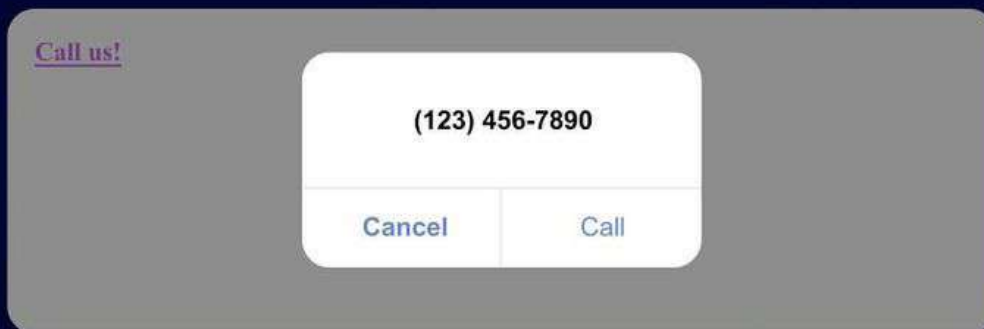

* Terms and Conditions apply

Result

HTML — Small Text

```html
<h1>50% off the new iPhone 14 !*</h1>
<p>
    <small>
        * Terms and Conditions apply
    </small>
</p>
```

04

Call Someone

🌮 This feature is wildly used and barely known. Just use this *anchor tag*, and problem solved!

Call us!

(123) 456-7890

Cancel | Call

Result

```
HTML — Call Someone

<a href="tel:123-456-7890">Call us!</a>
```

05

Refresh the page

🤔 If you need a website to refresh itself every X seconds, just add this **meta** tag.

```
● ● ●                                    HTML — Refresh the page

<meta http-equiv="refresh" content="3"/>
```

content="": This property will determine how long the webpage will wait until it refreshes itself again. In this example, it'll wait 3 seconds.

06

Email someone

💥 The **mailto:** string completely changes the way the href attribute in the anchor tag behaves!

Email me if you've got any questions!

Open in "Mail"?

| Cancel | Open |

Result

```html
HTML — Emailing someone

<a href="mailto:codewithemil@gmail.com">
    Email me if you've got any questions!
</a>
```
