Ghost

Ghost recursively detects all nodes in a selection. It then measures their dimensions before replacing them with shapes; the original layers are removed.

Select Layers

CREATOR

Yuan Qing Lim

POPULARITY

♡ 548   👤 32.8k

Select layers based on name, type, or similarity.

With the exception of Select Similar Layers, all commands make a sub-selection within the currently-selected layers, or creates a new selection of layers if the selection is empty.
