10 React Libraries to Enhance Development

Swipe to know »
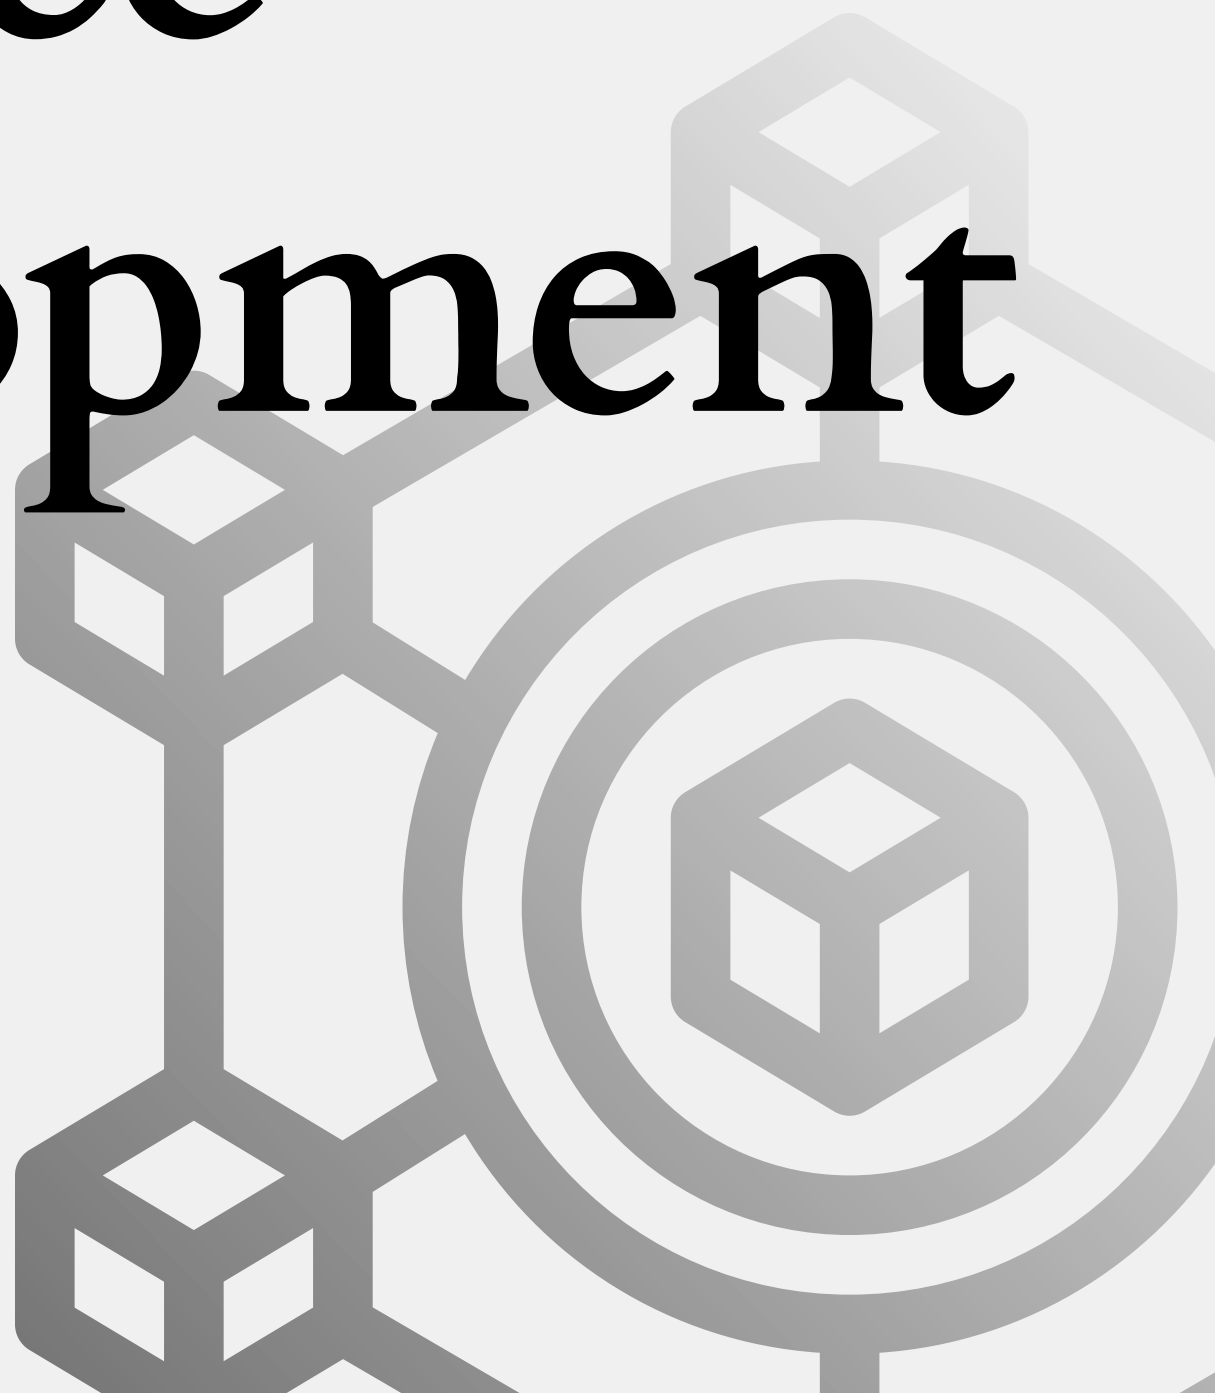

1
CopilotKit

A toolset for creating AI Copilots, enhancing automation and decision-making capabilities in applications.

2

React Email

A library designed to simplify the
creation and sending of emails from
React applications, integrating with
various email services.

3
React Player

A flexible and customizable component for embedding media players into React applications. It supports a wide range of media sources such as YouTube, Vimeo, SoundCloud, Facebook, and more.
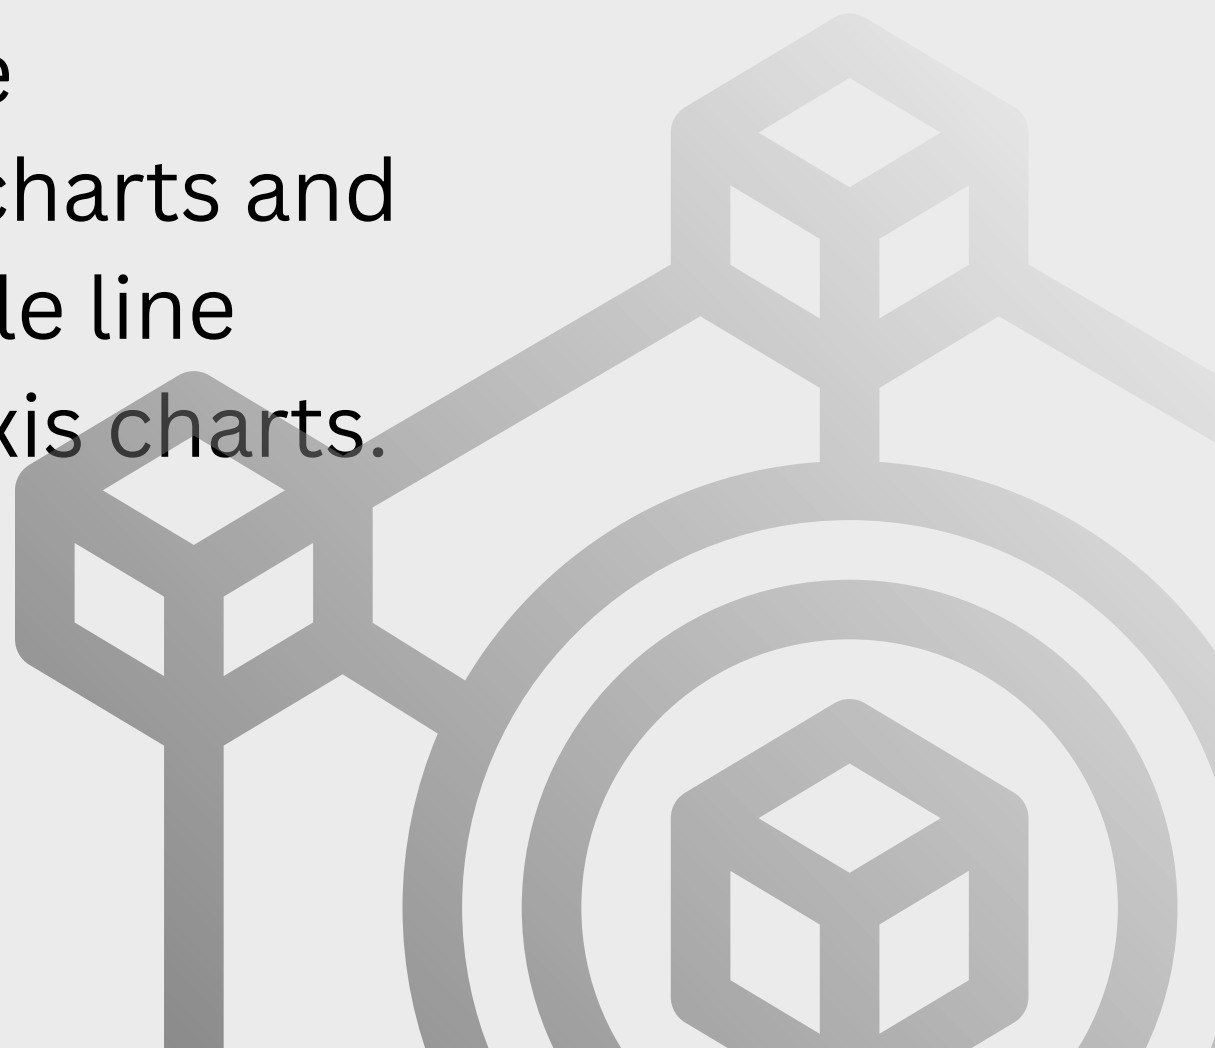

4

Victory

A popular data visualization library for React applications, developed by Formidable Labs. It provides a set of modular and customizable components for creating charts and graphs, ranging from simple line charts to complex multi-axis charts.

5
React Content Loader

A library that allows you to create SVG-powered component to easily create skeleton loadings.

6

React Hot Toast

A notification library for React applications that provides a simple and customizable way to display non-intrusive notifications to users.

7

aHooks

React Hooks library known for its ease of use and comprehensive collection of advanced Hooks. It supports server-side rendering (SSR) and addresses closure problems commonly encountered with functions.
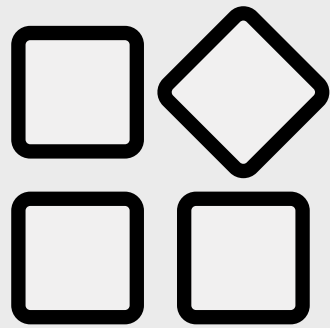

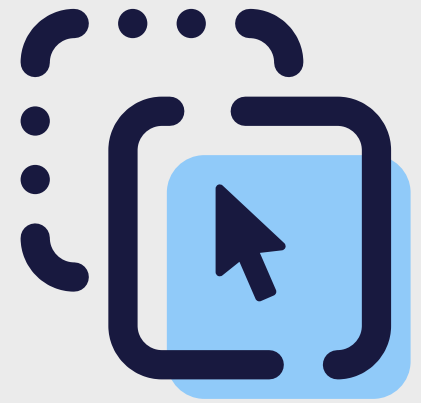

8

cmdk

A fast and composable command menu React component that can function as an accessible combobox. It allows developers to render items, automatically filtering and sorting them based on user input.
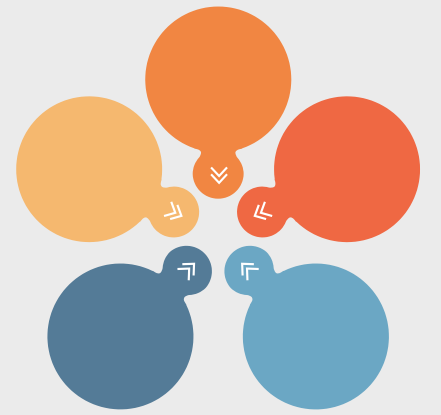

9

React DND

A powerful library for implementing drag-and-drop functionality in React applications. It simplifies the process of creating interactive drag-and-drop interfaces by providing a set of React components and hooks. React DND supports both mouse and touch interactions

10
React Diagrams

A straightforward and user-friendly diagramming library designed for React applications. It allows developers to easily create interactive diagrams and flowcharts with minimal configuration. React Diagrams emphasizes simplicity and ease of use, providing intuitive components and APIs for adding nodes, connecting them with customizable links, and handling user interactions.

Thank you for exploring these powerful tools for React development!
